MONOCHROME TUBE

I. DESCRIPTION

The VDC11208P-BP is a 12 inch, 90 degree, 20 mm neck magnetic deflection picture tube with lugs and tension-band implosion protection.

This tube is designed for grid-drive operation with 130 volts on the grid two, and has an 11.0 volts - 140ma heater.

Overall length is 280 mm max.

II. ELECTRICAL DATA

A. Gun type.....	Uni-Potential
B. Focusing Method.....	Electrostatic
C. Deflection Method.....	Magnetic
D. Deflection Angles (approx)	
1. Diagonal.....	90 degrees
2. Horizontal.....	82 degrees
3. Vertical.....	67 degrees
E. Direct Interelectrode Capacitance	
1. Cathode to all other electrodes (approx).....	5 pf
2. Grid No. 1 to all other electrodes (approx).....	6 pf
3. External conductive coating to anode..... (Note 1)	1200 pfmax 600 pfmax
F. External Conductive Coating and Implosion Protection Hardware.....	Are electrically connected

VDC1208P-BR

G. Heater Characteristics

1. Heater Voltage	11.0 Volts
2. Heater Current	140 MA

III. OPTICAL DATA

A. Phosphor Number	See Chart
B. Light Transmittance at Center (Approx.)	50 Percent
C. Antireflection Treatment	NO

IV. MECHANICAL DATA

A. Overall Length	280 mm max.
B. Greatest Dimensions of Tube	
1. Diagonal	310 mm
2. Width	274 mm
3. Height	222 mm
C. Minimum Useful Screen Dimensions (Projected)	
1. Diagonal	292 mm min.
2. Horizontal Axis	254 mm min.
3. Vertical	202 mm min.
4. Area	513 Sq-Cms.
D. Implosion Protection	Band with Lugs
E. Bulb	JB310N1
F. Bulb Contact (JEDEC No.)	J1-21
G. Basing Designation (JEDEC No.)	7QR
H. Base (JEDEC No.)	E7-91
I. Weight (Approx)	3.0 kg
J. EXTERNAL DIMENSIONS OF METAL HARDWARE (EXCLUDING LUGS AND CLIP IF ANY)	
1. Diagonal Axis	316 + 3 mm
2. Horizontal Axis	277 + 3 mm
3. Vertical Axis	225 + 3 mm

V. RATINGS (Absolute Maximum System) - CATHODE DRIVE SERVICE
Unless otherwise specified, voltage values are positive and measured with respect to Grid No. 1.

A. Maximum Anode Voltage	15000 Volts
B. Minimum Anode Voltage	9000 Volts
C. Grid No. 4 (Focusing Electrode) Voltage -200 to + 500 Volts	
D. Maximum Grid No. 2 Voltage	200 Volts

VDC1208P-BP

- E. Minimum Grid No. 2 Voltage 80 Volts
- F. Grid No. 1 Voltage
 - 1. Maximum Negative Value 154 Volts DC
 - 2. Maximum Negative Peak Value 220 Volts
 - 3. Maximum Positive Value 0 Volts DC
 - 4. Maximum Positive Peak Value 2 Volts
- G. Maximum Heater Voltage 12.65 Volts
- H. Minimum Heater Voltage 9.35 Volts
- I. Maximum Heater-Cathode Voltage (Note 5)
 - 1. Heater Negative with respect to Cathode
 - (a) During warm-up period Not To Exceed 15 seconds..... 130 Volts
 - (b) After equipment Warm-up Period.. 110 Volts
 - 2. Heater Positive with respect to Cathode
 - (a) Operation with the heater positive with respect to the cathode is not recommended.

VI. TYPICAL OPERATING CONDITION -Cathode Drive Service

Unless otherwise specified all voltage values are positive with respect to Grid No.1

- A. Anode Voltage 12000 Volts DC
- B. Grid No. 4 Voltage (Focusing Electrode)
(Note 3 and 4) 100 to 200 Volts DC
- C. Grid No.2 Voltage 130 Volts DC
- D. Cathode No. 1 Cut-off Voltage (Note 2).. -45 to -65 Volts DC

VII. X-RAY EMITTANCE

A. X-Radiation Registration Reference Point

The maximum anode voltage at which the X-Radiation emitted from this tube will not exceed 0.5 mR/h at 250ua anode current is 19KV.

B. X-Radiation Characteristics

The X-Radiation emitted from this picture tube, as measured in accordance with the procedure of JEDEC publication No. 64, (current revision), will not exceed 0.5mR/h throughout the useful life of the tube when operated with

VDC1208P-BP

regulation limits of a hypothetical power supply having a 5-megohm internal impedance, as shown by figure XM-36. The tube should not be operated beyond its Design Maximum Rated Anode Voltage, but its X-Radiation will not exceed 0.5mR/h for anode voltage and current combinations given by the Iso Exposure Rate Limit Characteristics as shown in Figure XM36.

Operation above those values shown by the curve may result in failure of the television receiver to comply with the Federal Performance Standard for Television Receivers. Sub-Part C of Part 78 of Title 42, Code of Federal Regulations. (PL-90-602), as published in the Federal Register, Volume 34, No. 247, of Thursday, December 25, 1969.

Maximum X-Radiation as a function of anode voltage at 250uA anode current is shown by the curve of Figure XM-35. XM-35. X-Radiation at constant voltage varies linearly with anode current.

Notes

1. Measured with implosion protection connected to external coating.
2. The Cathode No. 1 voltage for visual extinction of the undeflected focused spot.
3. With the combined Grid No. 1 bias voltage and video-signal adjusted to give an anode current of 150 microamperes on a 9" by 7" pattern from RCA 2F21 monoscope or equivalent.
4. Individual tubes will have satisfactory focus at some value between -100 and +200 Volts.
5. To avoid hum, the A.C. component of the heather-to-cathode voltage should be as low as possible and should be less than 11.00 Volts R.M.S.

VDC1208P-BP
